**Question 11: Compare the timeline of COVID-19 events**with e-commerce activities

Type: cross\_domain\_timeline | Domain: both | Context Added: ✓ Yes

COVID-19 led to a surge in e-commerce and accelerated digital transformation. Ecommerce sales grew 32.4% year-over-year in 2020; in 2021, growth was about half that, coming in at 16.1%. While e-commerce activities surged during lockdown, they have predominantly reverted to pre-pandemic patterns, but data suggests there will be a drastic increase of 169% in e-commerce purchases from new or low-frequency online shoppers post pandemic.

Length: 64 words

**Temporal Keywords:** during **Accuracy Score:** 0.221

## Enhanced: ODS +WebSearch + TemporalKG

The timeline of COVID-19 events and e-commerce activities reveals a significant correlation between the two. In 2020, as the pandemic took hold globally, e-commerce experienced a remarkable surge, with sales growing by 32.4% year-over-year. This surge was driven by lockdowns and restrictions that forced consumers to shift their shopping habits online. As the world adapted to the new normal in 2021, e-commerce growth moderated to 16.1%, indicating a stabilization of the initial surge. However, i...
